

Explanation

This repository contains the materials for my Order Lookup Automation Case Study.

Because the task required both technical documentation and a non-technical presentation, the repo includes:

README.md: Full documentation of the n8n automation, how it works, and how to use it

Workflow Export (.json): The exact n8n workflow used to build the order lookup automation

Presentation Slides (.pptx): A 3-slide deck explaining the solution at a non-technical level

PDF Version of the Slides: A static copy of the presentation for easy viewing

Additional Information: Workflow and test Screenshots
